

DIY Natural Cleaning Spray

Ingredients

- 1.25 cups distilled water
- 1/4 cup white vinegar
- 1/4 cup rubbing alcohol
- 15 drops essential oil

Instructions

1. Add all ingredients into your jar or bottle. Shake it up!
2. Label and date it. Keep it out of direct sunlight and use as needed!

Sustainability Through Art

Art is living for many people. People can use existing objects to create beautiful, new art.

A **circular economy** means to keep materials and products out of the landfill and to turn them into new products for as long as possible.

Sustainable art helps promote a circular economy!

Art can also be used to inspire and send messages.

Sustainable art sparks conversations and critical thinking about our own roles in keeping our Earth healthy!

Sustainability Through Gardening

Gardening has been a way of life for people for thousands of years. It gives us healthy food, but also allows us to take care of the environment that takes good care of us.

When we grow our own fruits, herbs, and veggies, we can limit waste, like packaging, and the amount of chemicals we use.

However, in a big city like LA, it can be difficult to grow our own food! Community gardens try to fill this gap.

Find one near you!

We have 47 community gardens as part of the LA Community Garden Council.

Their mission is to make sure every person in Los Angeles County can grow healthy food in their neighborhood.

Koreatown has the Mariposa Nabi Community Garden!

Sustainability Through Community Involvement

As a final note, we have the power to make our Earth the place we want ourselves and our loved ones to live in.

Older adults in particular have seen climate change happen and have fought against it for years. **Let's keep going!**

Keep the conversation going! Discuss with your family and friends on what about the Earth matters to you all.

Love Our Earth: Sustainability as a Lifestyle

What is a Sustainable Lifestyle?

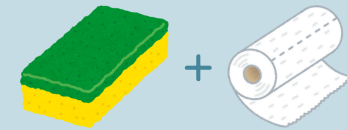

A sustainable lifestyle describes the pattern of individual choices and behaviors that aim to preserve the environments we live in.

How Culture Shapes Sustainable Lifestyles

Culture inspires creative solutions and stronger policies!

We can learn from traditions and practices from all around the world to help us build sustainable lifestyles.

Swedish Dishcloths

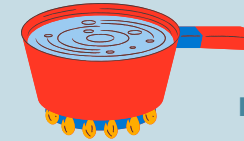

If a sponge and a paper towel had a baby!

Invented by Swedish engineer Curt Lindquist
Combined cellulose from trees and cotton in '50s

Replaces 15 paper towel rolls

Holds 15x its weight in water

Clean by boiling it or placing it on the top rack of your dishwasher

Our behaviors and choices are shaped by...

Identity

Cultural practices

Policies

Neighborhood design

Legal and financial systems

Sustainability Through Home Care

Taking care of where we live is essential to have a healthy living environment. Home care is already one of our main lifestyles!

Why use sustainable cleaning products?

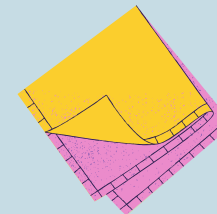

To breathe in cleaner air
Reduce the toxic chemicals we inhale

To know what's in your products
Use products already in your homes

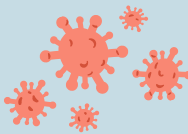

To reduce waste
Once you run out, you can easily make more in the same container and refill from bulk products

Microfiber Cloths

Without any cleaning chemicals, good quality microfiber cloths can pick up to 99% of bacteria!

They do not kill bacteria, fungi, and other germs, but the fibers are so thin that they trap and remove them from surfaces!

Just add water! Holds 8x its weight

Wash with warm* water and soap after use
Keep at least 4-5 cloths so you always have one!

*Hot water will damage the fibers

NOTE: If cleaning up after raw meat or after someone who is sick, just use a paper towel to be safe from these bacteria!
